

IN THE SPECIFICATION

Please replace the paragraph at page 4, lines 17-24, with the following rewritten paragraph:

According to the invention, a chamber is formed in this concave recess that forms an integral part of the additive reservoir. This chamber is advantageously provided with a metering system that preferably comprises an injector that is connected to an injection pump and that emerges at the place provided for dosing the additive (reservoir, engine, exhaust etc). The injector and the injection pump can each be located inside the recess or outside this. The metering system preferably includes a syringe pump such as described in application ~~FR~~ GB 0320880.8 in the name of the Applicant.
